# **UNIT 1: ASSISTING IN VETERINARY EXTENSION SERVICES**

## **Session 2: Assisting Farmers in Quality Farm Input Selection and Procurement**

# Content

Title	Slide No.
Session Objectives	4
Introduction	5
Inputs and outputs of a livestock production system	6
Selection and procurement of feed and fodder	7
Factors to be considered before placing a fresh order for feed supply	8
Broad categories of feed and fodder	9
Seeds of common fodder crops	10
Procurement of fodder seeds, fertilisers, and pesticides	11
Procurement of farm equipment	14
Procurement of animals	15
Summary	16

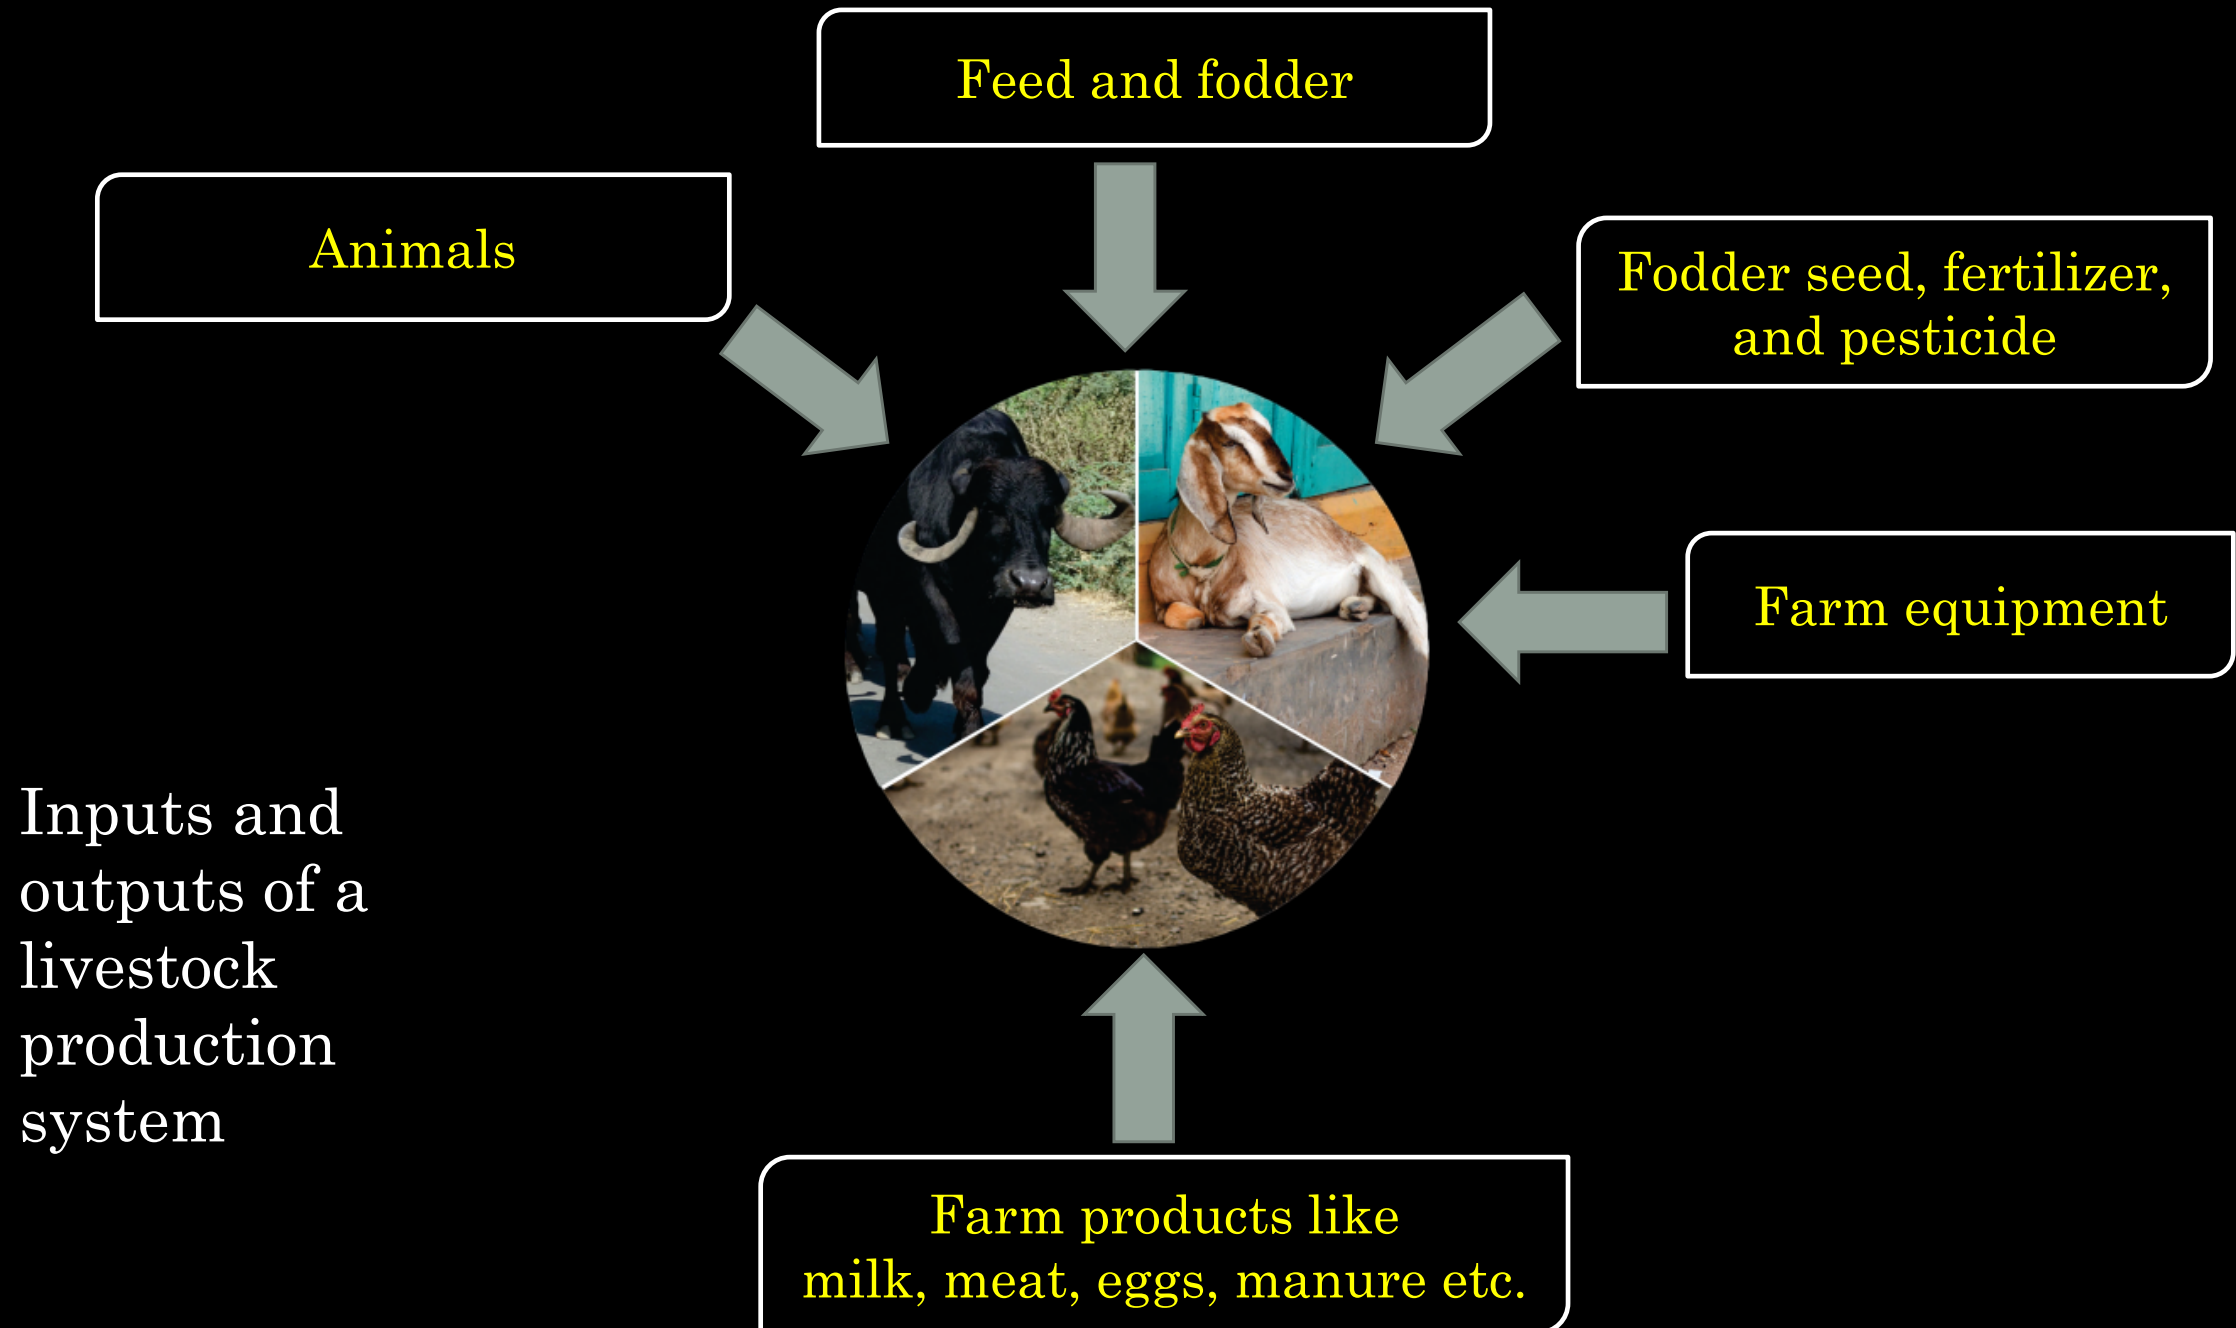

# Session Objectives

The student will be able to

- Describe the selection and procurement of feed and fodder
- Procurement of fodder seeds, fertilizers and pesticides
- Procurement of farm equipment and farm animals

# Introduction

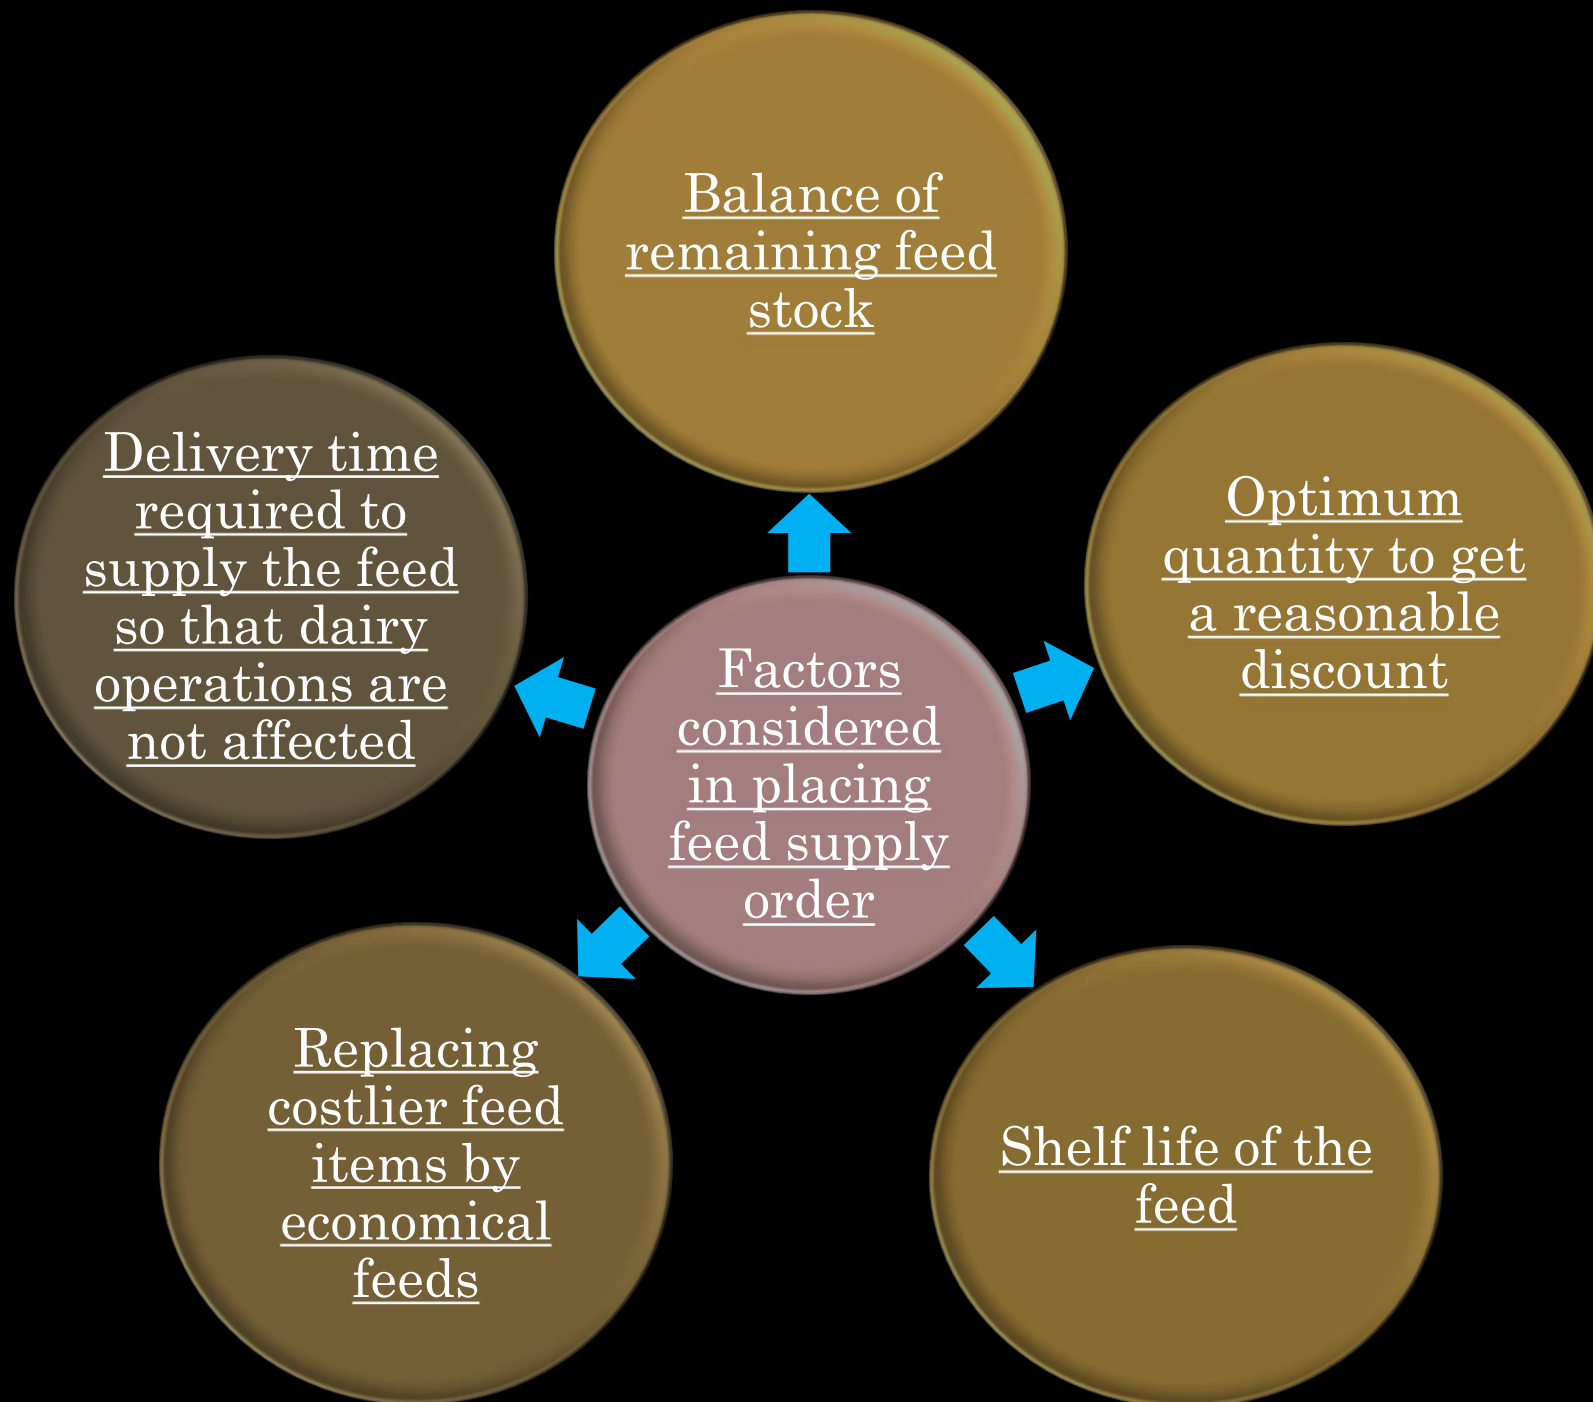

- The resources used in livestock farming such as animals, equipment (tools and implements), chemicals, feeds, fodder and fodder seeds are collectively called farm inputs.
- In a farm, a large quantity of these inputs is used.

# Selection and procurement of feed and fodder

- (a) nutritive value of the feedstuff
- (b) protein quality of the feedstuff
- (c) feed requirement of different categories of animals
- (d) feed supplements
- (e) major ingredients in feed

Broadly, three categories of feed and fodder are required for a dairy farm—green fodder, dry fodder (hay, straw) and concentrate.

# Broad categories of feed and fodder

Concentrate mixture in a gunny bag

Green fodder (jowar)

A heap of wheat straw

Green fodder (berseem)

# Procurement of fodder seeds, fertilisers, and pesticides

- Fodders, seeds, fertilizers and pesticides have an expiry date.
- Once the expiry date is passed the product (for e.g. pesticides or fertilisers) may not contain the correct concentration of active ingredients.
- Lack of proper concentration of active ingredients will lead to a loss in pesticide efficacy.

# Seeds of common fodder crops

Barseem seed

Oat seed

Sorghum seed

Maize seed

Common fertilisers (a & b) and organic manures (c & d) used in fodder production

a. Urea

b. DAP (diammonium phosphate)

c. Farmyard manure

d. Vermicompost

# Procurement of farm equipment

- Every farm requires machinery and equipment for day-to-day operations.
- The requirements depend upon the level of mechanization and the scale of operations.
- Some common machinery and equipment like chaff cutter, milking pails, milk cans and minor implements are essentially required for every livestock farm.

# Procurement of animals

- Purchase of new animals is a common practice for livestock farms.
- Animals can carry diseases without showing any visible signs, thus it is important to examine new animals carefully
- These examined animals are introduced to the existing herd to avoid an outbreak of a new infection to the existing farm animals

# Summary

In this session you have learnt about

- selection and procurement of feed and fodder
- Procurement of fodder seeds, fertilisers and pesticides
- Procurement of farm equipment and animals
